

João Paulo Lorena - 2DSM

The screenshot shows the pgAdmin 4 interface. On the left, the Object Explorer displays the database structure, including schemas, aggregates, collations, domains, FTS configurations, dictionaries, parsers, templates, foreign tables, functions, materialized views, operators, procedures, sequences, tables (7), trigger functions, types, views, and subscriptions. The 'public' schema is expanded, showing tables like 'evento', 'localizacao', 'relato', 'tipoevento', 'usuario', and 'usuario'. The main pane shows a SQL query in the Query Editor, with the following text:

```
1 SELECT e.nome_editora
2 FROM editora e
3 LEFT JOIN livro l ON e.id_editora = l.id_editora;
4
5 SELECT e.nome_editora, COUNT(l.id_livro) AS qtd_livros
6 FROM editora e
7 LEFT JOIN livro l ON e.id_editora = l.id_editora
8 GROUP BY e.nome_editora;
9
10 SELECT a.nome_autor, e.nome_editora, COUNT(l.id_livro) AS total_livros
11 FROM autor a
12 INNER JOIN livro l ON a.id_autor = l.id_autor
13 INNER JOIN editora e ON l.id_editora = e.id_editora
14 GROUP BY a.nome_autor, e.nome_editora;
15
16 SELECT e.nome_editora, COUNT(l.id_livro) AS total
17 FROM editora e
18 INNER JOIN livro l ON e.id_editora = l.id_editora
19 GROUP BY e.nome_editora
20 HAVING COUNT(l.id_livro) > 1;
21
22 SELECT
23     e.nome_editora,
24     COUNT(DISTINCT l.id_livro) AS total_livros_publicados,
```

The Query History pane is empty. The Data Output pane shows the message: "No data output. Execute a query to get output."
